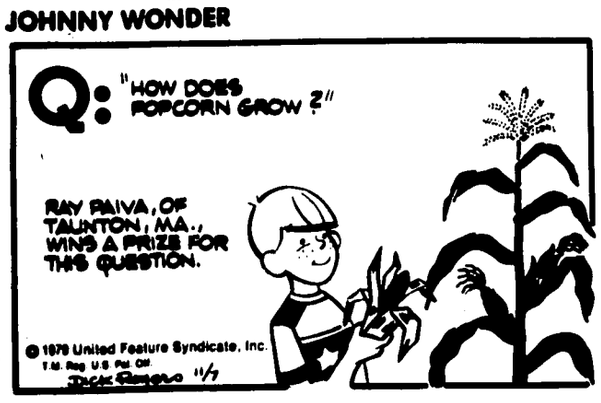
THE INCREDIBLE HULK

JOHNNY WONDER



A: Popcorn is a special kind of corn with very small, hard kernels. Ears of the tightly-packed kernels grow on jointed cornstalks that resemble bamboo. Most popcorn in this country is grown in Nebraska, Iowa, and Indiana, where the summers are very hot. When popcorn is heated, the natural moisture in the kernels turns to steam. The hard covering keeps the steam from escaping, causing pressure to build up inside the kernel. The pressure from the trapped steam finally bursts the tough shell with a popping sound. Then the white, tasty inside of the kernel puffs out.

You can win a *World Almanac* if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1250, Santa Cruz, CA 95061.
